RE: MVP-200 TESTIMONIAL

Mr. Furlong,

The time and labour saving attributes associated with velocity profile acquisition, as well as the increased multibeam data quality accredited to the MVP-200 unit were quickly realized following the installation of a rental unit onboard the Clearwater Deep Sea Trawlers multibeam survey vessel M/V Anne S. Pierce during the 1999 season.

Upon the completion of the season and looking toward the future, the benefits of the system were examined. Consideration was given to the ease of installation and use of the unit, coupled with the increased data collection production and efficiency. It soon became clear that the MVP-200 had proven itself as an essential element within the Anne S. Pierce suite of equipment. As a result the management of Deep Sea Trawlers made the natural choice of placing order with Brooke Ocean Technology for the delivery of a new MVP-200.

We are pleased to report that the new unit is scheduled for delivery on April 27, 2000.

Yours Truly,

Captain Mike Pittman
General Manager
Clearwater Deep Sea Trawlers
