Fisheries and Oceans Canada
Pêches et Océans Canada

"With the mounting financial pressures at the Bedford Institute -Dept. Fisheries & Oceans- to do more coastal oceanographic surveys with less and less ship time - we can now accomplish our monitoring objectives with the MVP200 in a fraction of the time and with less staff than by traditional methods. During the recent sea trials of the MVP200 which were completed on the CCGS Hudson this April '99 - we logged nearly 600 profiles on the Scotian Shelf with the MVP at speeds of 13 kts. These casts were collected with a single operator, and were carried out during transit between normal oceanographic stations. Essentially no 'ship time' was used to collect this wealth of data."
